# Description

Have you ever had a problem deciding what to make for dinner? With the “What’s For Dinner” application you can decide by rating recipes.

# Features

- Login/Register page
- Add a recipe, including name, ingredients, directions, and rating.
- View recipes by logged-in user or all recipes.
- Edit recipes belonging to logged-in user.
- Delete recipes belonging to logged-in user.

# Planning - User Stories

- A user that is logged in or not can view all recipes.
- A user that is logged in can view, edit, add, or delete their own recipes but not be able to edit or delete other users' recipes.
- A user can search for a recipe by name.
- A user can sort recipes by name or rating.

# Planning - Database

- Recipe table
  - ID
  - Name
  - Ingredients
  - Directions
  - Rating
  - UserId
- User table
  - ID
  - Username
  - Password

# Technology Stack

- C#
- Dot Net
- Razor templates
- SQL Server
- Bootstrap and Javascript

# Demo

# What I Learned

- Javascript for making the textarea for ingredients and directions automatically expand based on content.
- Search, sorting, and pagination.

# What's Next

- Search by Ingredient
- Add image to recipe
